DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20 and 30-39, drawn to an optical apparatus, classified in class 385, subclass 6.
- II. Claims 21-29, drawn to a method of handling electromagnetic waves, classified in class 359, subclass 341.1+.
- III. Claims 40-57, drawn to computer products and signals, classified in class 700, subclass 90+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have not been clearly disclosed as being capable of being used together. Please note that invention I has numerous species subject to restriction (should invention I be elected), and inventions II and III are not clearly related to all the species of invention I. Therefore, it is not clear that inventions II and III can be used with any particular embodiment of invention I. Invention II is a broadly claimed invention to handling electromagnetic waves that is not at all dependent

Art Unit: 2883

upon any computer product or signal. Examiner considers inventions I, II, and III to all be unrelated inventions to such an extent that they are not even examinable by the same Art Unit.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
